ai tag debugger

TRACKING AUDIT · 2026-10-19 06:39 UTC

localhost

Not ready. 2 broken findings need a developer before the numbers can be trusted; a consent risk and a duplicate event sit with Tag Manager.

Broken	Risk	Warning	Info	OK
2	1	1	0	4

Journeys

browse, checkout · desktop and mobile · 4 runs, all completed

Platforms checked

GA4 · Google Ads · Meta · TikTok

Plan

11 events · site plan, consent mode on

Consent

banner · 3 scenarios, analytics-only not supported by this banner

Campaign check

UTM, gclid, fbclid on the landing page

AI

Off · ai-tag-debugger 0.16.0, English

Overview

What to fix first

Grouped by who fixes it, most severe first. Each line opens its finding.

Developer 2 Site code and dataLayer

- `purchase` was sent without `currency`, `value`.
  GA4 `purchase` · 1 journey · 1 step
- `Purchase` was sent without `value`, `currency`.
  Meta `Purchase` · 1 journey · 1 step

Tag Manager 2 Tags, triggers and consent setup

- meta `PageView` fired before the visitor accepted cookies.
  Meta `PageView` · 4 journeys · 4 steps
- `add_to_cart` was sent 2 times by one action, which inflates counts and conversions.
  GA4 `add_to_cart` · 4 journeys · 4 steps

Marketing 0 The measurement plan

Nothing for marketing in this run.

What is working

OK gclid, fbclid, utm_source, utm_medium, utm_campaign survived the landing page's redirects and reached the hits. · all 4 runs

OK Every planned event was seen where the plan expects it: 4 of 4 on browse, 9 of 9 on checkout (desktop), 7 of 7 on checkout (mobile).

Journeys

Journey	Viewport	Steps	Hits	Problems
browse	desktop	4	9	2
browse	mobile	4	9	2
checkout	desktop	11	20	2
checkout	mobile	11	20	4

Findings 4

Open a finding for its evidence, where it happened and how to verify the fix. 2 OK checks are listed in the overview.

Developer 2 Site code and dataLayer

`purchase` was sent without `currency`, `value`.

GA4 `purchase` Developer 1 journey · 1 step

Broken

Impact

GA4 records the order but with no revenue: purchase conversions, ROAS and the ecommerce reports show 0 for every mobile order until this is fixed.

Likely cause

The mobile checkout pushes `purchase` with `transaction_id` and `items` but without the top-level `ecommerce.currency` and `ecommerce.value`. The desktop template sends both, so the two checkout templates have diverged.

Evidence

page_location	http://localhost:4321/thanks.html
page_title	Thank you · Demo Shop
transaction_id	T1792391968794
items	idTEE-01~nmBasic Tee~pr19.9~qt1
currency	missing
value	missing

Fix

1. Open the mobile thank-you page template and find the `purchase` dataLayer push.
2. Add `currency: "EUR"` and `value: <order total>` next to `transaction_id` at the top level of `ecommerce`.
3. Place a test order on a phone and check GA4 DebugView: `purchase` must show `value` and `currency`.

Where

11 checkout · mobile · Place the order

How to verify

Tag Assistant GA4 DebugView

`Purchase` was sent without `value`, `currency`.

Meta `Purchase` Developer 1 journey · 1 step

Broken

Tag Manager 2 Tags, triggers and consent setup

meta `PageView` fired before the visitor accepted cookies.

Meta `PageView` Tag Manager 4 journeys · 4 steps

Risk

Likely cause

Run with an AI provider for a likely cause and fix steps.

Evidence

`consent default`	`ad_storage=denied, analytics_storage=denied`
`hit`	`facebook.com/tr ev=PageView at +0.2s`
`banner accepted`	`+1.1s (step 2)`

Where

1 browse · desktop · Open http://localhost:4321/

1 browse · mobile · Open http://localhost:4321/

1 checkout · desktop · Open http://localhost:4321/

1 checkout · mobile · Open http://localhost:4321/

How to verify

Meta Test Events Tag Assistant Consent Mode

`add_to_cart` was sent 2 times by one action, which inflates counts and conversions.

GA4 `add_to_cart` Tag Manager 4 journeys · 4 steps

Warning

Journeys 4

Consent scenarios

The start page opened once per consent choice, answered through the banner's buttons. Hits per tag after the choice; a marked cell is a hit that should not have been sent. "Analytics only" is not offered by this banner.

Tag	No choice yet	Accept all	Reject all	Analytics only
GA4 `page_view`	1	1	1 cookieless	–
GA4 `view_item_list`	1	1	1 cookieless	–
Meta `PageView`	1	1	⚠ 1	–

GA4 keeps sending after "Reject all" as cookieless Consent Mode pings (gcs=G100), which is allowed. Meta has no consent mode and sent a full PageView: that is the risk finding.
